

Point-by-point response to reviewers

Carmen Cabrera and Francisco Rowe

Reviewer 1

***Reviewer 1, Comment 1 (R1.1).** The authors have addressed my substantive concerns. The revised manuscript now includes the proportional baseline/residual analysis, spatial residual diagnostics, spatial block cross-validation and lagged robustness checks, clearer treatment of the bias metric, and additional model reporting. I do not think another substantive revision is necessary. I would only ask the authors to correct minor remaining issues, especially the apparent $\times 1000$ typo in Equation 3.4; there are few also a few typos (“supplemenatry”, “statitically”, “mode” instead of model).*

A: We thank the reviewer for the careful re-reading of the manuscript and for noting these remaining minor issues. We have corrected the apparent $\times 1000$ typo in Equation 3.4, as well as the remaining typographical errors identified in the text.

We would like to thank the Reviewers and Editor once again for the careful handling of our manuscript and we are pleased to know that it got accepted for publication.
